Lab Assignment 5

Modules

This lab assignment uses many elements provided in the main bibliographic reference for these lectures:

Programming in Python 3

A Complete Introduction to the Python Language,
2nd Edition,
Mark Summerfield

1 Exercises

Exercise 1 *Create the `TextUtil` Module that is referenced in the slides for Chapter 5. You can/should use the code that is already provided.*

□

Exercise 2 *Write a program that imports module `TextUtil` and tests each of the functions defined in it.*

□

Exercise 3 *Extend the functionality provided by `TextUtil` by implementing in it a new function `is_included(str1, str2)` that checks if `str1` is a substring of `str2`.*

In our implementation of `is_included()`, you should include its docstring.

□

Exercise 4 *Extend the program you wrote to answer Exercise 2, so that function `is_included()` is also thoroughly tested.*

□

Exercise 5 *Write programs that import and use each of the modules from Python's Standard Library that are referenced in the slides for Chapter 5, Section 2.*

Besides the information available on the slides, you should also consult the information available online.

□
